

IGT Universal Game Adaptor

SERVICE WINDOW ON YOUR IGT ADVANTAGE FLOOR

AN EVOLUTIONARY STEP.

The ability to deliver a compelling player experience is key to competitive differentiation. You recognize the Service Window is the best way to enhance communications and deliver exciting applications to players.

IGT has listened to your request for a path to Service Window on all video games floorwide without a major upgrade of infrastructure.

INTRODUCING THE UNIVERSAL GAME ADAPTOR.

While both IGT and the industry recognize a G2S floor is the best long-term solution, the Universal Game Adaptor is an open standards-based device that can be used today to transition to Service Window functionality.

When coupled with the IGT Systems Adapter, the Universal Game Adaptor safely implements the Service Window on a non-G2S floor, using picture-in-picture technology.

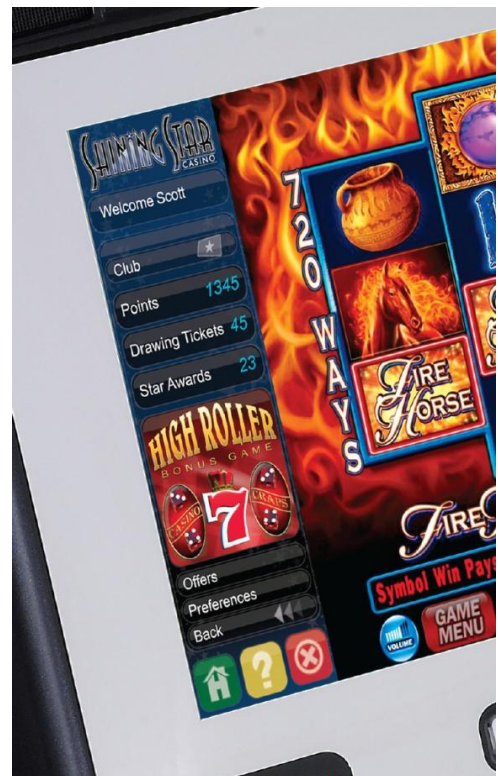

By offering a solution that is open standards based, IGT has preserved the sanctity of the machine. Optimal performance and regulation-approved behavior is also ensured, while dynamic player communication in the video screen is enabled.

Industry standards are the key to future innovation and market relevance, but implementation costs are often a barrier to adoption.

The Universal Game Adaptor is an economical, lower total-cost-of-ownership device that provides a reliable solution for your current floor and an upgrade path to the future.

BENEFITS

- Enables Service Window on your existing IGT Advantage® network
- Simple, consistent player interface on the game screen of all video machines
- Floorwide, ubiquitous player experience for all promotions
- Open-standards-based design maintains the sanctity and integrity of the machine
- Ownership and accountability remains clear
- Lower total-cost-of-ownership solution
